

Easy to light and easy to use, StoveTec Stoves make cooking with wood or charcoal effective and enjoyable. Thanks to a well-designed and precisely manufactured rocket-style combustion chamber, cooks can boil 1 gallon (5 liters) of water in 20 minutes using just three 1.5" by 12" inch long sticks of wood (4 x 30 cm). One additional stick is enough to simmer for another 45 minutes. Designed and built to cook three meals a day, every day, StoveTec Stoves are durable and dependable.
