

SEGMENT

Designer: Alessandro Duranti

SEGMENT is an indoor lighting modular system with direct and indirect light.

It can be installed in various way: wall, angle, ceiling and suspension.

It offers different solutions, thanks to the possibility of personalizing the compositions.

The characteristic of the system is the compact minimal design,

born to satisfy several daily needs, as in the private and in the public life, joining light, sound and time in an exclusive element.

The **LAMPS** are made of painted or oxidized extruded aluminium

and can host different sources: direct and indirect fluorescent, strip led one-colour or RGB;

the lamps can also host led, halogen or metal halide spot,

that has the peculiarity to be fixed in every position of the system.

The body permits the transit of the cables. Otherwise it's available the module completed with a digital display "TOUCH PANEL" that permits the switch on, dimming, switch off and recalling light shows, previously registered, of the various lighting group.

AUDIO: Modules that integrates loud speaker, middle and tweeter are available, as other modules that host mp3 player to create a suggesting atmosphere listening the music.

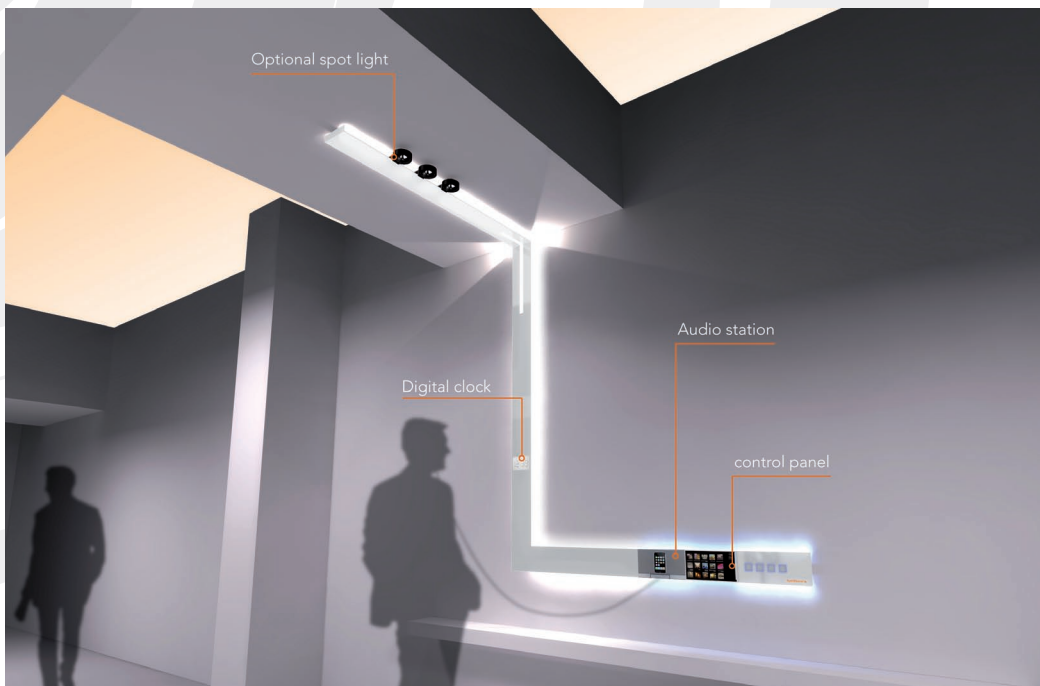

TIME: to be always update about time and weather, Segment also offers lighting elements completed of clocks and barometer with digital display.
