**e dell'innovazione Web page** www.humanscale.com; www.humanscalehealthcare.com

**Descrizione del prodotto** The T5 Point-of-Care Technology Cart teams mobile computing ease and comfort with a high-performance power system. The first truly ergonomic solution of its kind, the T5 was developed based on extensive research and interviews with regular users of point-of-care carts to excel where similar cart solutions fall short, including comfort for a wide range of users, maximum mobility in confined spaces, and long-lasting power.

Weighing just 70 pounds, the T5 is the lightest cart on the market and offers one of the smallest footprints available for easy maneuvering in tight corridors, around hospital beds, and other small spaces. Additional mobility features include push/pull handles on three sides and high-quality casters that transition easily between carpeted and hard surfaces. Designed to meet the ergonomic requirements of 99% of users in both sitting and standing postures, the T5's keyboard, monitor and work surface are each independently and intuitively adjustable for maximum user comfort and healthy typing and mousing. A gas cylinder operated by a foot pedal allows for easy overall changes in the cart's height. The T5's energy-conscious and quick-charging internal power system stays cool, eliminating the need for a fan and helping to limit the spread of contagions.

**Materiali** The T5 consists primarily of 100% recyclable aluminum, with steel and high-quality hardened plastic components.

**Dimensioni** The T5 has been ergonomically designed to meet 99% of the population's usage criteria for sitting and standing. The keyboard adjusts from 26" to 49" from the floor; the writing surface adjusts from 31" to 49" from the floor; the (center of) the monitor adjusts from 45" to 75" from the floor. The T5's compact base footprint is just 20" deep x 16" wide.

**Tecnologia / Funzionamento** The T5 powers PCs, tablet PCs, and notebook computers on an ergonomic mobile cart in healthcare environments. Its energy-conscious and quick-charging internal power system stays cool without a fan, which helps limit the spread of contagions. Available with a 40-amp/hour battery and three AC outlets, the T5 provides eight hours of continuous use between chargings, and recharges 75% in just one hour.

**Benefici per l'ambiente** Developed with sustainability in mind, the T5 is constructed, by weight, of more than 50% recycled materials, and is itself 95% recyclable. The T5's quick-charging power system is designed for maximum efficiency and does not require the use of a fan.

**Benefici per la persona** Designed to meet the ergonomic requirements of 99% of users in both sitting and standing postures, the T5's keyboard, monitor, and work surface are each independently adjustable for maximum user comfort and safety. Its ultra-light weight and small footprint complement ergonomic function by enabling easy maneuverability in confined spaces.

Altri prodotti che seguono criteri di innovazione accessibile e sostenibile per una migliore qualità della vita

Humanscale's entire product line is designed for high-performance ergonomic comfort and safety, sustainability, and timeless aesthetics. Our award-winning range of environmentally sensitive workplace furniture and tools includes seating, keyboard supports, monitor arms, task lighting, peripheral devices and more.
